

Project Arguments

```
int main(int argc, char *argv[]) {
    if ( argc > 2 ) exitError("Too many arguments");
    if (argc == 1) {
        cout << "Needs to read from keyboard\n";
        string s;
        cin >> s ;
        cout << "Read: " << s << endl;
        cout << "This read only one data, not until eof. " << endl;
    }
    else
        cout << "Needs to read from file " << string(argv[1])+".extension" << endl;
    return 0;
}

static void exitError(string s) {
    cout << s << endl;
    exit(1);
}
```
